

w12-p1 switch Register and Login, and log

This screenshot shows the initial state of the Register form. In the VS Code editor, the `Register_76.js` file is open, with the `initialState` and `Register_76` function highlighted in red. The browser shows the `localhost:3000/register` page with a form titled "Jobify Register". The form has fields for Name, Email, and Password, a Submit button, and a link "Not a member yet? Register". The Redux DevTools component inspector shows the state of the `Register_76` component, with the `isMember` property highlighted in red.

```
1 import { useState, useEffect } from "react";
2 import Wrapper from "../assets/images/wrappers/Register_76";
3 import { Logo_76, FormRow_76 } from "../components";
4 import Alert_76 from "../components/Alert_76";
5 import { useAppContext } from "../context/appContext_76";
6
7 const initialState = {
8   name: "",
9   email: "",
10  password: "",
11  isMember: true,
12  showAlert: false,
13 };
14
15 const Register_76 = () => {
16   const [values, setValues] = useState(initialState);
17
18   const { showAlert, displayAlert } = useAppContext();
19
20   const toggleMember = () => {
21     setValues({ ...values, isMember: !values.isMember });
22   };
23   const handleChange = (e) => {
24     console.log("e.target", e.target);
25     setValues({ ...values, [e.target.name]: e.target.value });
26   };
27
28   return (
29     <Wrapper>
30       <Logo_76 />
31       <h2>Register</h2>
32       <FormRow_76 type="text" value={values.name} onChange={handleChange} />
33       <FormRow_76 type="text" value={values.email} onChange={handleChange} />
34       <FormRow_76 type="password" value={values.password} onChange={handleChange} />
35       <button type="submit" value="Submit" />
36       <p>Not a member yet? Register</p>
37     </Wrapper>
38   );
39 };
40
41 export default Register_76;
